

# Raption 22

*DC Fast Charging Station for Electric Vehicles*

## Application

Designed to be installed in both public access environments (urban spaces, shopping centres, airports, public car parks...) and private ones (companies with EV fleet, EV car rental/sharing...) where DC charge is appreciated but power availability is limited. Its main interest is to have the users spending on the surrounding businesses.

## Concept Design

Conceived to address the main problem identified by Charge Point Owners / Operators when Fast Charging (low uptime), Raption 22 series bases its functioning in state-of-the-art modular power technology.

Another key attribute considered has been external design. Sophisticated, slim and robust are just some attributes that can be used to describe this series and that makes it ideal for any type of site.

## Product highlights

### *For Charge Point Operator / Owner*

- Its **modular power technology** ensures a very high uptime (reducing the non-operation expenditure) since in case of power module failure the rest of modules continue charging.
- Lower energy consumption (and therefore OpEx) is achieved due to a **sustained high efficiency** level resulting from disconnecting power modules when lower charging power is requested by the EV.
- **Simultaneous AC and DC** capability, enabling two cars charging at the same time
- It offers a unique **connector care concept** by means of gun locking feature (optional) and cable floating design, which results on a reduction of cable breaking risk (i.e. lower OpEx and higher uptime).
- Its **frontal key-locked door** provides an easy access to the inside of the charger which results in a lower OpEx due to a quicker installation and service (preventive/corrective). Moreover, it allows the charger to be installed next to a wall, optimising the available space.

### *For Charge Point User*

- Its **8" touch-screen daylight readable** not only provides clear charging instructions (e.g. wrong EV shift position to start the charge) and plug status (e.g. reserved charge point) but also allows the user to select amongst several languages.
- **Accessibility for the disabled** has also been considered, complying with international standards regarding the height of connectors/ display that facilitates its operation.
